

Cornus florida ‘Grovisor’
Spring Grove® Dogwood

The Spring Grove® Dogwood was planted as a seedling dogwood in the cemetery 54 years ago. This particular plant has always been noted for its prolific flowering habit. It wasn't until

1977 that one of its finest attributes came to light. The winter of '77 proved disastrous for a great number of plants, dogwoods included. However, the Spring Grove® Dogwood came through unscathed and flowered in its normally abundant manner. Hardiness, coupled with an extremely floriferous habit, have made the Spring Grove® Dogwood one of the finest flowering dogwoods to carry a United States patent.

Thuja plicata ‘Grovisli’
Spring Grove™ Western Arborvitae

The Spring Grove™ Western Arborvitae was selected from Spring Grove Cemetery & Arboretum for its tight, pyramidal shape that branches to the ground. It also has a strong central leader that will not split under heavy snow loads. This plant has a very fast growth rate of 2 ft or more per year. The Spring Grove™ Western Arborvitae also performs very well as a hedge. Deer do not like the taste

of this plant and it maintains a nice green color through the winter months.

Welcome to Spring Grove Cemetery & Arboretum's Plant Collection

This plant booklet is intended to be used as an educational tool or a guide to selecting plant material for the home landscape. Some of the plant material found in Spring Grove is known to be invasive in certain parts of the country. Before planting any questionable material always check with a local university, arboretum, or extension agent to determine the potential impacts to the local environment.

One of every type of plant in the collection is marked with a metal label that indicates the common and botanical name of that specimen. If the names in the booklet do not correspond with the names on the label then it can be assumed that the name in the booklet is the correct nomenclature as the plant booklet is routinely updated.

Hybrid plants are denoted by the letter x following the generic (genus) name of the plant. Also indicated in this booklet is the parentage of any plant that is of a hybridized origin. The parent plants are listed in parentheses behind the botanical name of each hybrid plant, e.g:

Tilia x euchlora (*T. cordata* x *T. dasystyla*)

Some hybrid plants do not have representative parents listed due to confusion regarding the exact parentage of the hybrid.

Finding Plants at the Arboretum

The plant specimens are located and labeled on the arboretum grounds according to a grid system. The grid coordinates are clearly shown on the fold-out map accompanying the booklet. The letters A through W are used to designate 200 foot intervals west to east on the grounds. The numbers 1 through 42 are used to designate 200 foot intervals south to north on the grounds. Other locations may be listed in lieu of sections. Please consult the Location Key listed at the bottom of this page.

Each specimen in this booklet is followed by two sets of coordinates, for example:

Blue Ash**21-Q10**

The first coordinate before the dash and provides the section number within the cemetery grounds.

The second set of coordinates gives a more specific location corresponding with the fold-out map.

Ohio Champions

The following is a list of tree species taken from the Ohio Department of Natural Resources Division of Forestry's website. These 19 trees located in Spring Grove's Arboretum are the largest trees of each species growing in Ohio. The method used to determine which tree is the largest is that followed by the American Forestry Association; namely, the sum of circumference of the tree in inches, the height of the tree in feet, and one-fourth of the average crown spread in feet.

The locations of these Ohio Champion Trees are marked on the fold-out map which accompanies this booklet. A boulder with an attached plaque has been placed at the base of each tree in the arboretum grounds.
